

ABSTRACT OF THE DISCLOSURE

5 An apparatus for responding to a current user command
associated with one of a plurality of task/domains. The
apparatus comprises: a digital storage device that stores
cumulative feedback data gathered from multiple users
during previous operations of the apparatus and segregated
in accordance with the plurality of task/domains; a first
digital logic device that determines the current
10 task/domain with which the current user command is
associated; a second digital logic device that determines
a current response to the current user command on the
basis of that portion of the stored cumulative feedback
data associated with the current task/domain; a first
15 communication interface that communicates to the user the
current response; and a second communication interface
that receives from the user current feedback data
regarding the current response. The current feedback data
is added to the cumulative feedback data stored in the
20 digital storage device and associated with the current
task/domain.
